Methodology: A cohort of students representing each graduating class is submitted to the National Student Loan Clearinghouse. Data is returned to the institution showing the graduates' subsequent enrollment at any institution. Student attendance data is requested annually from the NSLC and each annual data set is appended to the prior years' data. If a student is found enrolled on any NSLC report within the follow-up time frame, the student is included. The NSLC does not provide the the student's degree status at the subsequent institution if the participating institution has not voluntarily provided it, so it cannot be assumed that the purpose is to attend graduate or professional school. Therefore, IRP has only included graduates in the percentages if the subsequent institution is a four-year institution.

This report is updated annually after June 30th of each year.
